For over 30 years since its establishment the China Steel Corporation (CSC) has become one of the key players in the global iron and steel industry. With clear realization that consumption of energy and resources, and emission of air pollutants, wastewater and other wastes increase the environmental load of production processes, CSC as a supplier of industrial materials is committed to playing an active role in terms of environmental protection towards the goals of Environmental Management and Cleaner Production. Based on developments in the last century, CSC aims to be an integral part of the future "Green Industry System."

Integrated steel production is a major industry that requires intensive technology and capital. In the interest of thoroughly carrying out safety and hygiene measures and preventing occupational hazards, CSC continually educates itself and its contractor employees to emphasize the concept of "care for life." CSC has initiated a "safe guard program" to eliminate unsafe working environments and behaviors as a means to control risks. CSC endeavors to establish a solid foundation of safety and hygiene, and is convinced that this is a core value for corporate sustainable development.
